

New Laboratory Products

The **Smartbox X2** is a new programmable dispensing unit by Amann Girrbach designed to measure the water-to-powder ratio of plaster products in precise grams to milliliters. According to the manufacturer, the Smartbox X2's dosing of water and plaster is rapid and gram exact and compared to a manual dosing technique the user may save up to 25% of plaster and time. Amann Girrbach claims that the integrated scales automatically measure the dosage for manual weighing and signals when refilling is required. The Smartbox X2 can store 8 kilograms or 17.64 pounds of plaster and 1 liter of water. The Smartbox X2 is available for \$3,407.00 (suggested retail) and \$2,384.90 (government).

Dental Ventures of America, Inc. recently introduced its new American produced **DVA Liquid Waxer**. According to the manufacturer it provides a continuous supply of wax at a customer specified, controlled and consistent working temperature to maximize production. The DVA Liquid Waxer purportedly eliminates the necessity of repeatedly re-heating the wax spatula or returning to the wax supply tin to gather additional wax. The product consists of an electronic base unit, which precisely controls the wax temperature and wax delivery speed, and a precision handpiece, which holds and delivers the wax to the work area at both the temperature and speed desired. Each base unit can regulate and control the use of two separate handpieces. Hence, two operators can work independently from only one Liquid Waxer unit. DVA claims that the Liquid Waxer is a convenient device for use with all waxing procedures; however, it has been found to be extremely helpful whenever a significant amount of wax must be applied for gross coverage. The Liquid Waxer Base Unit with 1 Pen, 1 Tip and Liquid Wax Rods (70 grams), Stand and Instructional DVD can be purchased for \$1,250.00 (suggested retail) and \$1,050.00 (government).
